THIS IS UNEVALUATED INFORMATION

25X1

1. An all weather, hard surfaced road (#924) runs from Sanok west northwest to Bannow via Krosno. This same type of all weather hard surfaced road (#924) runs from Sanok south southeast to Lesko and then veers northward toward Przemyśl.
2. This all weather road is over two lanes wide and is designed for heavy usage, with a minimum of maintenance. The subbase of this road consists of natural clay, sand and gravel. The road foundation is of crushed rock and gravel. The top layer of the road is asphalt.
3. A concrete steel bridge (#1) which is in good condition and could absorb heavy usage is located in Sanok. (See Map) The bridge crosses a stream which flows east and west. The stream runs into the San River. The bridge is over two lanes wide.
4. Another concrete steel bridge (#2) is located in the southeastern suburb of Sanok and crosses the San River. The San River flows in a northwest-southeast direction along the east side of Sanok. The bridge is also over two lanes wide and is able to absorb heavy usage. A third concrete steel bridge (#3) is located at Zagarz. It is in good condition, over two lanes wide and crosses the Orlawa River.
5. A loose surfaced, graded, all weather road (#909) runs from Sanok southeast to Zaluz and crosses over the San River. It is approximately one lane wide and is in good condition.
6. A number of fair, dry weather, loose surfaced roads (#935) run in the vicinity of Płowce, Zahutyn, Trepcza and Olchowce. These villages and settlements are located in the vicinity of Sanok. These roads are usable only in good weather. However in winter when the ground is frozen the dirt roads are able to absorb heavy usage. The dirt roads have a sand and clay foundation. Occasionally the dirt roads were graded and drained by farmers and villagers.
